Copyright, Limitation of Liability and Revision Rights

This publication contains information proprietary to Danfoss A/S. By accepting and using this manual the user agrees that the information contained herein will be used solely for operating equipment from Danfoss A/S or equipment from other vendors provided that such equipment is intended for communication with Danfoss equipment over an PROFIBUS serial communication link. This publication is protected under the Copyright laws of Denmark and most other countries.

Danfoss A/S does not warrant that a software program produced according to the guidelines provided in this manual will function properly in every physical, hardware or software environment.

Although Danfoss A/S has tested and reviewed the documentation within this manual, Danfoss A/S makes no warranty or representation, either express or implied, with respect to this documentation, including its quality, performance, or fitness for a particular purpose.

In no event shall Danfoss A/S be liable for direct, indirect, special, incidental, or consequential damages arising out of the use, or the inability to use information contained in this manual, even if advised of the possibility of such damages. In particular, Danfoss A/S is not responsible for any costs including but not limited to those incurred as a result of lost profits or revenue, loss or damage of equipment, loss of computer programs, loss of data, the costs to substitute these, or any claims by third parties.

Danfoss A/S reserves the right to revise this publication at any time and to make changes in its contents without prior notice or any obligation to notify previous users of such revisions or changes.

Safety Note

The voltage of the frequency converter is dangerous whenever connected to mains. Incorrect installation of the motor, frequency converter or fieldbus may cause damage to the equipment, serious personal injury or death. Consequently, the instructions in this manual, as well as national and local rules and safety regulations, must be complied with.

Safety Regulations

1. The frequency converter must be disconnected from mains if repair work is to be carried out. Check that the mains supply has been disconnected and that the necessary time has passed before removing motor and mains plugs.
2. The [OFF] key on the control panel of the frequency converter does not disconnect the equipment from mains and is thus not to be used as a safety switch.
3. Correct protective earthing or grounding of the equipment must be established, the user must be protected against supply voltage, and the motor must be protected against overload in accordance with applicable national and local regulations.
4. The earth leakage currents are higher than 3.5 mA.
5. Protection against motor overload is not included in the factory setting. If this function is desired, set par. 1-90 to data value *ETR trip* or data value *ETR warning*.
Note: The function is initialised at 1.16 x rated motor current and rated motor frequency. For the North American market; the ETR functions provide class 20 motor overload protection in accordance with NEC.
6. Do not remove the plugs for the motor and mains supply while the frequency converter is connected to mains. Check that the mains supply has been disconnected and that the necessary time has passed before removing motor and mains plugs.
7. Please note that the frequency converter has more voltage inputs than L1, L2 and L3, when load sharing (linking of DC intermediate circuit) and external 24 V DC have been installed. Check that all voltage inputs have been disconnected and that the necessary time has passed before commencing repair work.

Warning against Unintended Start

1. The motor can be brought to a stop by means of digital commands, bus commands, references or a local stop, while the frequency converter is connected to mains.
If personal safety considerations make it necessary to ensure that no unintended start occurs, these stop functions are not sufficient.
2. While parameters are being changed, the motor may start. Consequently, the [OFF] key must always be activated.
3. A motor that has been stopped may start if faults occur in the electronics of the frequency converter, or if a temporary overload or a fault in the supply mains or the motor connection ceases.

Warning:

Touching the electrical parts may be fatal - even after the equipment has been disconnected from mains.

Also make sure that other voltage inputs have been disconnected, such as external 24 V DC, load sharing (linkage of DC intermediate circuit), as well as the motor connection for kinetic back up.

Please take note of discharge times and further safety guidelines from the section: "Safety and conformity", in the respective Design Guide (MG.33.Ax.yy).

Introduction

About this Manual

First time users can obtain the most essential information for quick installation and set-up in these chapters:

Technical Overview

How to Install

For more detailed information including the full range of set-up options and diagnosis tools please refer to the chapters:

How to Configure the System

Parameter Mapping List

Technical Overview

This VLT® 5000 to FC 302 converter (MCA114) is a option intended for replacing a VLT® 5000 with a FC 302 Automation Drive, in a PROFIBUS network.

With this PROFIBUS converter option the FC 302 will react as a VLT® 5000 on the PROFIBUS network; it means that it will in most cases not be necessary to change anything in the PLC programming or configuration.

The FC 302 will identify itself as a VLT® 5000 drive on the PROFIBUS network, and a write command to e.g. *Ramp Up Time* in VLT® 5000 is automatically linked to the corresponding ramp up time parameter in FC 302.

**N.B.:**

Some parameters in the VLT® 5000 are not supported in the FC 302 and some FC 302 parameters can not be accessed via the PROFIBUS converter Option MCA114.

Please refer to the section: *Parameter Mapping List* for more information.

If a write request is attempted to a parameter selection not supported, the converter will discard the value and issue a positive reply.

Only parameters and functions described in this manual are supported.

**N.B.:**

The replacement drive must match the power-size, or be bigger than the replaced VLT® 5000 drive. Also observe that the choice of brake-chopper matches the replaced drive.

**N.B.:**

Please observe local rules and regulations when replacing drives in existing installations.

Constrains

Software versions

- The converter requires a FC 302 with a minimum drive-software version 5.5X.
- The converter software is based on a VLT® 5000 ver. 3.9x software and PROFIBUS ver. 4.5 software.

Hardware

- MCA114 only supports FC 302 only.
- There is no support for PROFIBUS FMS networks.
- The FC 302 has fewer digital I/O's and analogue output signals compared to VLT® 5000. These signal is mapped to MCB101 *General I/O* option that must be mounted in the FC 302 in order to utilize all I/O's.
- Terminal mapping:

VLT® 5000		FC 302	
Terminal	Function	Terminal	Function
16	Digital input	X30/2*	Digital input
17	Digital input	X3/3*	Digital input
18	Digital input	18	Digital input
19	Digital input	19	Digital input
27	Digital input	27	Digital input
29	Digital input	29	Digital input
32	Digital input	32	Digital input
33	Digital input	33	Digital input
20	GND Digital input	20	GND Digital input

13	24 Volt out	13	24 Volt out
50	10 Volt out	50	10 Volt out

N.B:

* = MCB101 *General I/O* option

** = Switch "S201" must be OFF

*** = Switch "S202" must be ON

VLT® AutomationDrive PROFIBUS converter

- Introduction -

Performance

- Main Actual Value (MAV) is calculated different, compared to VLT® 5000.
- The motor control algorithm of the FC 300 is still used and will result in a better motor performance compared to VLT® 5000.

N.B. Factory values:

After initialisation most parameters are set to match the factory settings of the VLT® 5000 parameters.

N.B. Linked Setups:

To achieve compatible functionality with regards to setup change with running motor, FC 302 setups must be linked. This is done on the FC 302 using par. 0-12.

Hardware

This manual relates to the following hardware:

- MCA114 VLT® 5000 to FC 302 PROFIBUS converter option, type no. 130B1246.
- MCB101 General I/O option, type no. 130B1125 (uncoated), 130B1212 (coated)
- MCB107 External 24 Volt DC Supply, type no. 130B1108 (uncoated), 130B1208 (coated)
- PROFIBUS adaptor Sub-D9 connector, type no. 130B1112.

Mechanical adaptation

The following mechanical adapter plates are available:

Ordering #	VLT® 5000 style	Height [mm]	Width [mm]	VLT® 5000 type
130B0183	Bookstyle, IP20	395	90	5001-5003 200-240V 5001-5005 380-500V
130B0184	Bookstyle, IP20	395	130	5004-5006 200-240V 5006-5011 380-500V
130B0185	Compact, IP20	395	220	5001-5003 200-240V 5001-5005 380-500V 5004-5006 200-240V 5006-5011 380-500V 5001-5011 550-600V

FC 300-related Literature

The following literature is available for the FC 300 series:

Title	Literature no.
FC 300 Operating Instructions	MG.33.Ax.yy
FC 300 Design Guide	MG.33.Bx.yy

Please also refer to:

MOC	Motor oriented control	STW	Status Word
MSB	Most Significant Bit		
MRV	Main Reference Value		
N/A	Not applicable		
PCD	Peripherals Communication Data (process data)		
PCV	Parameter Characteristics (Parameter channel)		

How to Install

The MCA114 PROFIBUS converter Option

Connecting the Bus Line

Proper termination of the bus line is essential. A mismatch of impedance may result in reflections on the line that will corrupt data transmission.

- The PROFIBUS Option Card has a suitable termination, activated by switch 1 located on the PROFIBUS converter option. The switches must be on to terminate the bus. The factory setting is off.
- Nodes at the physical ends of each segment must be terminated.

N.B.:

Please pay special attention to the pin-numbering vs. colour coding on the PROFIBUS connector if exchanging the PROFIBUS connector.

On FC 302 the PROFIBUS connectors are colour-coded, but not on the VLT® 5000, which could have lead to swapping of the bus wires.

Correct colour-coding:

62 = RxD/TxD – Positive, Red cable
(PROFIBUS B)

63 = RxD/TxD – Negative, Green cable
(PROFIBUS A)

How to Install Option in Frequency Converter

To install a fieldbus option in the drive you will need:

- The fieldbus option
- Fieldbus option adaptor frame for the FC 300. This frame is deeper than the standard frame, to allow space for the fieldbus option beneath.
- Cable holders

Instructions:

- Remove the LCD panel from the FC 300.
- Remove the frame located beneath and discard.
- Push the option into place. Two positions are possible, with cable terminal facing either up or down. The cable up position is often most suitable when several frequency converters are installed side by side in a rack, as this position permits shorter cable lengths.
- Push the fieldbus option adaptor frame for the FC 300 into place.
- Replace the LCD panel.
- Attach cable.
- Fasten the cable in place using cable holders.

N.B.:

After installing the MCA114 option, be aware of the following parameter settings:

- Par. 8-02 *Control Word Source* = [3] Option A

How to Configure the System

Configure the PROFIBUS Network

All PROFIBUS stations that are connected to the same bus network must have a unique station address.

Before a VLT® 5000 can be replaced with a FC 302 with MCA114, only the station address needs to be configured in the FC 302.

The PROFIBUS address of the FC 302 can be selected via:

- Hardware switches
- Parameter 9-18 *Node address*

Setting the PROFIBUS Address using the Hardware Switches

Using the hardware switches it is possible to select an address range from 0 to 125 (factory setting 127) according to the table below: ON = 1, OFF = 0

	VLT® 5000								FC 302							
Switch	1	2	3	4	5	6	7	8	8	7	6	5	4	3	2	1
Address	+1	+2	+4	+8	+16	+32	+64	-	-	+64	+32	+16	+8	+4	+2	+1
Examples:																
1	1	0	0	0	0	0	0	-	-	0	0	0	0	0	0	1
35	1	1	0	0	0	1	0	-	-	0	1	0	0	0	1	1
82	0	1	0	0	1	0	1	-	-	1	0	1	0	0	1	0

N.B.:

Switch off the power supply before changing the hardware switches.

The address change will come into effect at the next power-up, and can be read in parameter 9-18 *Node address*.

Note the location and sequence of the hardware switches as illustrated in the table above.

Setting the PROFIBUS Address via Parameter 9-18 *Node address*:

Setting the address via parameter 9-18 *Node address* or the PROFIBUS SSA-command is possible, if the hardware switches are set to 126 or 127 (factory switch setting). The address change will come into effect at the next power-up.

Commissioning

After copying the station address from the VLT® 5000 to the FC 302, power must be cycled to the FC 302.

The master/PLC should now recognize FC 302, as a VLT® 5000, and the NS LED on the MCA114 option should now be solid green which indicates that communication between master and slave is established.

If the NS LED flashes, the master/PLC has not recognized the FC 302.

For more information please refer to section: *Troubleshooting*.

LED Behaviour

The option has 2 bi-coloured LED's:

LED label	Description
NS	Network Status
MS	Module Status (DP-V1 communication)

NS: Net Status

State	LED		Description
Power On	Red: 	Solid red	The option is defect. Contact Danfoss Drives
	Green: 	Flashing green	The option is OK.
Baud rate search	Green: 	Flashing green	Searching for the baud rate. Check the connection to the master if the option stays in this state.
Wait Parameterizing	Green: 	Long green flash	Baud rate found - waiting for parameters from the master.
	Red: 	Long red flash	Wrong parameters from the master.
Wait Configuration	Green: 	Short green flash	Parameters from master OK – waiting for configuration data.
	Red: 	Short red flash	Wrong Configuration data from the master.
Data Exchange	Green: 	Solid green	Data Exchange between the master and the FC 300 is active.
	Red: 	Flashing red	Clear State. Warning 34 is active and a bus reaction in par. 8-04 is executed.

MS: Module status (DP-V1 communication)

LED		Description
	Off	No PROFIBUS DPV1 communication is active.
Green: 	Short green flash	DP V1 communication from a Master Class 1 (PLC) is active.
Green: 	Long green flash	DP V1 communication from a Master Class 2 (MCT 10, FDT) is active.
Green: 	Steady green	DP V1 communication from a Master Class 1 and 2 is active.
Red: 	Flashing red	Internal error.

N.B.:

Please note: The LED's are not compatible with the VLT® 5000 PROFIBUS LED's.

EMC Precautions

The following EMC precautions are recommended in order to achieve interference-free operation of the PROFIBUS. Additional EMC information is available in the FC 300 series Design Guide.

**N.B.:**

Relevant national and local regulations, for example regarding protective earth connection, must be observed.

The PROFIBUS communication cable must be kept away from motor and brake resistor cables to avoid coupling of high frequency noise from one cable to the other. Normally a distance of 200 mm (8 inches) is sufficient, but maintaining the greatest possible distance between the cables is recommended, especially where cables run in parallel over long distances. When crossing is unavoidable, the PROFIBUS cable must cross motor and brake resistor cables at an angle of 90 degrees.

	5000 series	FC 300 series
Parameter number	102	120
Parameter name	Motor Power	Motor Power
Data range	0.18 – 600 kW	0.09 – 3000 kW

	5000 series	FC 300 series
Parameter number	103	122
Parameter name	Motor Voltage	Motor Voltage
Data range	200 – 600 Volt	50 – 1000 Volt

	5000 series	FC 300 series
Parameter number	104	123
Parameter name	Motor frequency	Motor frequency
Data range	20 -1000 Hz	20 -1000 Hz

	5000 series	FC 300 series
Parameter number	105	124
Parameter name	Motor Current	Motor Current
Data range	Power Unit dependable	Power Unit dependable

	5000 series	FC 300 series
Parameter number	106	125
Parameter name	Rated motor speed	Motor nominal speed
Data range	100 – 60000	10 – 60000

	5000 series	FC 300 series
Parameter number	107	129
Parameter name	Automatic motor adaptation	Automatic motor adaptation
Data values	[0] Adaptation off	[0] Off
	[1] Adaptation on, Rs and Xs	[1] Enable complete AMA
	[2] Adaptation on, RS	[2] Enable reduce AMA

	5000 series	FC 300 series
Parameter number	108	130
Parameter name	Stator resistor	Stator resistance (Rs)
Data range	Power Unit dependable	0.0140 – 140.0000

	5000 series	FC 300 series
Parameter number	109	135
Parameter name	Stator reactance	Main reactance
Data range	Power Unit dependable	1.0000 – 10000.0000

	5000 series	FC 300 series
Parameter number	110	150
Parameter name	Motor magnetizing, 0 rpm	Motor magnetizing at 0 rpm
Data range	0 – 300 %	0 – 300 %

	5000 series	FC 300 series
Parameter number	111	152
Parameter name	Min. frequency normal magnetizing	Min Speed Normal Magnetising [Hz]

	5000 series	FC 300 series
Parameter number	417	702
Parameter name	Speed PID proportional gain	Speed PID proportional gain
Data range	0.000 – 0.150	0.000 – 1.000

	5000 series	FC 300 series
Parameter number	418	703
Parameter name	Speed PID integral time	Speed PID Integral Time
Data range	2.00 – 999.99	2.00 – 20000.00

	5000 series	FC 300 series
Parameter number	419	704
Parameter name	Speed PID differential time	Speed PID Differentiation Time
Data range	0.00 – 200.00	0.00 – 200.00

	5000 series	FC 300 series
Parameter number	420	705
Parameter name	Speed PID D-gain limit	Speed PID Diff. Gain Limit
Data range	5.0 – 50.0	1.0 – 20.0

	5000 series	FC 300 series
Parameter number	421	706
Parameter name	Speed PID low-pass filter	Speed PID Lowpass Filter Time
Data range	5.0 – 200.0 ms	1.0 – 100.0

	5000 series	FC 300 series
Parameter number	422	155 index 0
Parameter name	U0 voltage at 0 Hz	U0 voltage
Data range	0.0 – par. 103	0.0 – 1000.0 V

	5000 series	FC 300 series
Parameter number	423	155 index 1
Parameter name	U1 voltage	U1 voltage
Data range	0.0 – par. 103	0.0 – 1000.0 V

	5000 series	FC 300 series
Parameter number	424	156 index 1
Parameter name	F1 frequency	F1 frequency
Data range	0.0 – par. 104	0.0 – 1000.0 Hz

	5000 series	FC 300 series
Parameter number	425	155 index 2
Parameter name	U2 voltage	U2 voltage
Data range	0.0 – par. 103	0.0 – 1000.0 V

- Parameter Mapping List -

	5000 series	FC 300 series
Parameter number	426	156 index 2
Parameter name	F2 frequency	F2 frequency
Data range	0.0 – par. 104	0.0 – 1000.0 Hz

	5000 series	FC 300 series
Parameter number	427	155 index 2
Parameter name	U3 voltage	U3 voltage
Data range	0.0 – par. 103	0.0 – 1000.0 V

	5000 series	FC 300 series
Parameter number	428	156 index 3
Parameter name	F3 frequency	F3 frequency
Data range	0.0 – par. 104	0.0 – 1000.0 Hz

	5000 series	FC 300 series
Parameter number	429	155 index 4
Parameter name	U4 voltage	U4 voltage
Data range	0.0 – par. 103	0.0 – 1000.0 V

	5000 series	FC 300 series
Parameter number	430	156 index 4
Parameter name	F4 frequency	F4 frequency
Data range	0.0 – par. 104	0.0 – 1000.0 Hz

	5000 series	FC 300 series
Parameter number	431	155 index 5
Parameter name	U5 voltage	U5 voltage
Data range	0.0 – par. 103	0.0 – 1000.0 V

	5000 series	FC 300 series
Parameter number	432	156 index 5
Parameter name	F5 frequency	F5 frequency
Data range	0.0 – par. 104	0.0 – 1000.0 Hz

	5000 series	FC 300 series
Parameter number	433	712
Parameter name	Torque control, open loop proportional gain	Torque PI Proportional Gain
Data range	0 (Off) – 500%	0 (Off) – 500%

	5000 series	FC 300 series
Parameter number	434	713
Parameter name	Torque control, open loop integral time	Torque PI Integration Time
Data range	0.002 – 2.000 sec	0.002 – 2.000 sec

	5000 series	FC 300 series
Parameter number	437	730
Parameter name	Process PID Normal/Inverse contr	Process PID Normal/Inverse Control
Data values	[0] Normal	[0] Normal
	[1] Inverse	[1] Inverse

	5000 series	FC 300 series
--	--------------------	----------------------

- Parameter Mapping List -

Parameter number	438	731
Parameter name	Process PID Anti windup	Process PID Anti Windup
Data values	[0] Off	[0] Off
	[1] On	[1] On

	5000 series	FC 300 series
Parameter number	439	732
Parameter name	Process PID start frequency	Process PID Start Speed
Data range	Fmin – fmax	0 – 6000 rpm

	5000 series	FC 300 series
Parameter number	440	733
Parameter name	Process PID proportional gain	Process PID proportional gain
Data range	0.00 – 10.00	0.00 – 10.00

	5000 series	FC 300 series
Parameter number	441	734
Parameter name	Process PID integral time	Process PID integral time
Data range	0.01 – 9999.99	0.01 – 10000.00

	5000 series	FC 300 series
Parameter number	442	735
Parameter name	Process PID differentiation time	Process PID Differentiation Time
Data range	0.00 – 10.00	0.00 – 10.00

	5000 series	FC 300 series
Parameter number	443	736
Parameter name	Process PID diff. gain limit	Process PID Differentiation Time
Data range	5.0 – 50.0	0.00 – 10.00

	5000 series	FC 300 series
Parameter number	444	Not converted
Parameter name	Process PID lowpass filter time	

	5000 series	FC 300 series

	[4] Parameter setup 4	[4] Parameter setup 4
	[5] Active setup	[5] Active setup

	5000 series	FC 300 series
Parameter number	971	971
Parameter name	Save data values	PROFIBUS Save Data Values
Parameter type	Unsigned 8 (5)	Unsigned 8 (5)
Data value	[0] Not active	[0] Off
	[1] Save active setup	[1] Store all setups
	[2] Save edit setup	[1] Store all setups
	[3] Save all setups	[1] Store all setups

	5000 series	FC 300 series
Parameter number	980	Not converted
Parameter name	Defined parameters	

	5000 series	FC 300 series
Parameter number	981	Not converted
Parameter name	Defined parameters	

	5000 series	FC 300 series
Parameter number	982	Not converted
Parameter name	Defined parameters	

	5000 series	FC 300 series
Parameter number	990	Not converted
Parameter name	Modified parameters	

	5000 series	FC 300 series
Parameter number	990	Not converted
Parameter name	Modified parameters	

	5000 series	FC 300 series
Parameter number	990	Not converted
Parameter name	Modified parameters	

Troubleshooting

Step-by-step troubleshooting

After copying the station address from the VLT® 5000 to the FC 302, power must be cycled to the FC 302. The master/PLC should now recognize FC 302, as a VLT® 5000, and the NS LED on the MCA114 option should now be solid green which indicates that communication between master and slave is established.

- If the NS LED flashes, the master/PLC has not recognized the FC 302.
- Check if station address is the same in the FC 302 as the replaced VLT® 5000.
- Check par. 9-63 *Actual Baudrate*. If the drive has a connection to the master this parameter will display the detected baudrate. If not master has been detected the parameter will display: "No baud rate found".
- Check par. 9-53 *PROFIBUS Warning Word*.

Bit	Warn. Word (Hex)	Description
0	0001	Connection with DP-master is not O.K.
1	0002	Unused
2	0004	FDL (Field-bus Data link Layer) is not O.K.
3	0008	Clear data command received
4	0010	Actual value is not updated
5	0020	Baudrate search
6	0040	PROFIBUS ASIC is not transmitting
7	0080	Initialising of PROFIBUS is not ok
8	0100	Drive is tripped
9	0200	Internal CAN error
10	0400	Wrong configuration data from PLC
11	0800	Wrong ID sent by PLC
12	1000	Internal error occurred
13	2000	Not configured
14	4000	Timeout active
15	8000	Warning 34 active

- Check the section *Constraints* for more information on limitations.
